## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 1-12 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Claims 1-4 recite, among other features, varying a one-hundred-percent duty cycle fluorescent electrical control signal for operating a fluorescent lamp disposed for illuminating the display screen between a first fluorescent control signal level for illuminating the display screen at the predetermined maximum illumination level and a second fluorescent control signal level for illuminating the display screen at a predetermined transition illumination level less than the predetermined maximum illumination level but greater than the predetermined minimum illumination level and greater than a minimum fluorescent operating control signal level sufficient for maintaining continuous constant-brightness output from the fluorescent lamp at a one-hundred-percent duty cycle, so as to illuminate the display screen at the determined desired display screen illumination level when the determined desired display screen illumination level is between said predetermined maximum illumination level and said predetermined transition illumination level, varying an LED electrical control signal for operating at least one light emitting diode disposed for illuminating the display screen between a first LED control signal level for illuminating the display screen at the predetermined transition illumination level and a second LED control signal level for illuminating the display screen at the predetermined minimum illumination level, so as to illuminate the display screen at the desired display screen illumination level when the

Art Unit: 2629

determined desired display screen illumination level is between said predetermined transition illumination level and said predetermined minimum illumination level, as the desired display screen illumination level decreases to said predetermined transition illumination level, discontinuing supply of the fluorescent control signal to the fluorescent lamp to discontinue illumination output from the fluorescent lamp, supplying the LED control signal to the at least one light emitting diode, and varying the LED control signal in accordance with the monitored current display screen illumination level to illuminate the display screen at the determined desired display screen illumination level and as the desired display screen illumination level increases to said predetermined transition illumination level, initiating supply of the fluorescent control signal to the fluorescent lamp to initiate illumination output from the fluorescent lamp, varying the LED control signal in accordance with the monitored current display screen illumination level to assist the fluorescent tube in illuminating the display screen at the determined desired display screen illumination level as the fluorescent tube is initially powered, and discontinuing supply of the LED control signal to the at least one light emitting diode when the monitored current display screen illumination level indicates that the illumination output of the fluorescent tube is sufficient to illuminate the display screen to the determined desired display screen illumination level.

Harter discloses varying a high brightness light source and a low brightness light source so that they transition from one to the other according to ambient conditions. Harter does not disclose transitioning according to ambient and current display conditions

Art Unit: 2629

Yamamoto discloses varying a backlight according to current display conditions.

However, the combination of Harter and Yamamoto does not disclose the above limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
